- Property Generation and Validation
- Script Execution
- Office 365 - Group Domain Restrictions
- Office 365 - User Domain and License Restrictions

[Click to download additional policies](#)

Read a brief description of the policy you have selected:

This policy ensures that user accounts belong to appropriate groups. You can configure it to:

- Add user accounts to certain groups
- Remove user accounts from certain groups

You can select groups and set up criteria. The policy adds a user account to, or removes it from, the selected groups depending on whether the user account meets

Policy Conditions
Policy conditions are criteria the policy uses to determine what objects are to be added or removed from groups.

You can configure conditions for the policy to control group memberships of only the objects satisfying the conditions.

Conditions:
All 'User (user)' objects

Policy Action
You can configure policy so that it either adds objects to groups or removes objects from groups.

Specify whether you want the policy to add objects to groups or to remove objects from groups. You can set up a list of groups in the next step of the wizard.

Add object to groups if object satisfies policy conditions

Remove object from groups if object satisfies policy conditions
